Instructions

Print a page of grids. Optionally, laminate within a dry erase sheet to make a reusable game.
Grab two D6 dice. Pick a grid to play with.

GAME PLAY

Playing in turns, a player rolls both dice.
The player calls out an equation and solution from the two numbers.
Marks a space (with their initial) that matches the outcome of the equation.
Only twenty outcomes (add, multiply, subtract, divide) are possible:
1-12, 15, 16, 18, 20, 24, 25, 30 and 36. (See **Cheat Sheet** below.)
Play strategically, blocking your opponent as needed.
Alternate plays until someone wins the round.

WINNING

The winner of a round is the first player to mark a straight line of three adjacent cells in any direction (like tic-tac-toe). Play three rounds to determine the overall winner.
